# Medi-Dose®, Inc.

How to Remove Zebra Drivers

If you have previously installed a Zebra printer, Windows will use the existing driver when you try to install the LP2844. Follow these instructions to remove all of the existing Zebra drivers if you are not able to install version 5.3.5.15, the driver required for MILT 3.0.

1. From the Printers and Faxes window, delete all Zebra printers and then select FILE – SERVER PROPERTIES from the menus.

2. On the Drivers tab of the Print Server Properties window, delete all Zebra and ZDesigner drivers, then click OK.

3. Restart your computer. **This is not optional**.

4. Install the Zebra LP2844 using the instructions provided by Medi-Dose.

As always, support for all Medi-Dose products is free.

Please contact us if you have any questions or comments.
